Calmar Pain Relief presented: "Scrambler Therapy technology and how it could save WC Co.'s, TPA's and Self Insurers money" at TKCK's Annual Seminar at Fenway Park September 24, 2014.

Rick DeBerardis

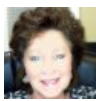

Director of Business Development, Calmar Pain Relief, LLC

We hope you enjoyed Calmar's presentation. Scrambler Therapy is a new treatment for severe, chronic, neuropathic pain, resistant to morphine and other drugs. It is a non-invasive, non-narcotic, pain free treatment, without known side effects and clinically proven effective by scientific research. Many injured workers with severe, chronic, neuropathic pain are not expected to return to work. Most of these injured workers are on Narcotic Pain Medication. Calmar's Medical Director, Dr. Stephen D'Amato, has a proven track record of successfully treating injured workers with severe chronic neuropathic pain who had little hope of reducing/eliminating their pain, their need for addictive narcotic pain medication, and returning many of these injured workers back to work. We would be very pleased to provide you with further information, additional materials or come to your office to speak to your managers, nurse case managers and claims adjusters about the benefits of Scrambler Therapy and how it could save your company money. If you did not attend the Fenway Seminar, Calmar would be very pleased to provide you with materials explaining what Scrambler Therapy is all about. Scrambler Therapy is a new treatment for severe, chronic, neuropathic pain, resistant to morphine and other drugs.
